

VENKATA NARAYANA CHATTU

DevOps Engineer | AWS & Azure Cloud

+91 6302080280 | venkatanarayanachattu@gmail.com | Hyderabad, India | [linkedin.com/in/venkatanarayana-chattu-devops-ai](https://www.linkedin.com/in/venkatanarayana-chattu-devops-ai) | github.com/Chattu-DevOps-1359

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 9+ months of hands-on experience building and maintaining production-grade cloud infrastructure on AWS and Azure. Designed CI/CD pipelines that reduced deployment effort by ~40%, provisioned 10+ cloud resources using Terraform IaC, and set up full-stack monitoring (Prometheus + Grafana + CloudWatch) improving incident response time by ~30%. AWS Certified DevOps Engineer – Associate with proven ability to containerise, orchestrate, and secure scalable workloads using Docker, Kubernetes (EKS), and IAM least-privilege policies.

TECHNICAL SKILLS

Cloud Platforms:	AWS (EC2, S3, VPC, IAM, Route53, Auto Scaling, CloudWatch, EKS) · Azure (VMs, VNETs)
CI/CD & Automation:	Jenkins · GitHub Actions · Terraform · Ansible · Maven · Nexus
Containers & Orchestration:	Docker · Kubernetes (K8s) · Amazon EKS · Helm
Monitoring & Logging:	Prometheus · Grafana · AWS CloudWatch
OS & Scripting:	Linux (Ubuntu / CentOS) · Bash · Shell Scripting · YAML
Version Control & Build:	Git · GitHub · Maven · Nexus Artifact Registry
Core Competencies:	Infrastructure as Code · Container Orchestration · CI/CD Automation · Cloud Security · High Availability · Incident Management

EXPERIENCE

DevOps Engineer Intern — RR Technosoft, Hyderabad

Jan 2025 – Sep 2025

- Architected Jenkins & GitHub Actions CI/CD pipelines for 3 microservices using multi-stage builds and artifact promotion via Nexus, **cutting manual deployment effort by ~40%** and shrinking release cycles from weekly to daily.
- Provisioned 10+ AWS resources (EC2, VPC, IAM, Route53, Auto Scaling) using **Terraform IaC** and automated configuration of 8+ servers with Ansible playbooks, **reducing environment-setup time by ~35%**.
- Containerised 3 applications with Docker and deployed workloads to **Amazon EKS** using Helm charts, eliminating environment drift between dev and staging and cutting container start-up failures by ~25%.
- Built end-to-end observability stack (Prometheus + Grafana + CloudWatch) with custom alert thresholds; **improved mean time-to-alert by ~30%** and authored RCA reports that reduced repeat incidents by 20% over 3 months.
- Enforced IAM least-privilege access controls and security-group hardening across 4 AWS accounts, **eliminating all over-provisioned roles** identified in a quarterly audit.
- Supported Azure VMs and VNet networking for 2 dev environments, enabling hybrid-cloud testing workflows.

Associate Cloud Support Engineer — E*TRADE / Morgan Stanley (Academic Project)

Jan 2025 – Jul 2025

- Monitored CPU, memory, and log health across AWS services via CloudWatch dashboards; **maintained 99% uptime SLA** with proactive anomaly-detection alerting.
- Automated 6+ repetitive infrastructure tasks (AMI snapshots, S3 lifecycle cleanup, IAM access reviews) using Ansible + Terraform, **saving ~4 engineering hours per week**.
- Conducted structured RCA investigations for production incidents, documenting corrective actions that **prevented 3 recurring outage patterns**.

PROJECTS

- Java DevOps Pipeline** — Built a Maven-based Java app CI/CD pipeline on Jenkins: build → test → Nexus publish → Docker push → EKS deploy; reduced build failures by enforcing unit-test coverage gates.
- Node.js CI/CD** — Automated GitHub Actions workflow for a Node.js REST API — lint → test → Docker build → ECR push → rolling EKS update; achieved zero-downtime deployments across 3 environments.
- Terraform AWS Infrastructure** — Wrote reusable Terraform modules (VPC, EC2 Auto Scaling, ALB, IAM) parameterised across dev / staging / prod, eliminating all manual console provisioning.
- Prometheus & Grafana Monitoring Stack** — Deployed full observability stack on EKS via Helm; built 5+ custom dashboards and PagerDuty-integrated alert rules covering latency, error rate, and disk saturation.

EDUCATION

Bachelor of Science — Computer Science

2021 – 2025

Kakatiya University, Telangana

CERTIFICATIONS

AWS Certified DevOps Engineer – Associate

2025

Amazon Web Services (AWS) · Issued 2025

DevOps · AWS · Azure · CI/CD · Kubernetes · K8s · Docker · Terraform · Ansible · Jenkins · GitHub Actions · Linux · Bash · EC2 · S3 · VPC · IAM · EKS · CloudWatch · Prometheus · Grafana · Infrastructure as Code · IaC · Container Orchestration · Site Reliability · Cloud Security · High Availability · Multi-Cloud · Helm · Nexus · Maven · Auto Scaling · Route53
